AEM Project No. 1561-1601**

Dear Mr. Williams:

Atlanta Environmental Management, Inc. (AEM) is pleased to provide the DeKalb County School District (DCSD) an electronic copy of the Lead in Drinking Water Sample Results for Columbia High School (Facility ID #2054). Samples were collected on February 3, 2017. Laboratory analytical results were received from Analytical Environmental Services, Inc., on February 17, 2017.

FINDINGS

AEM collected 105 drinking water samples from 54 sources at Columbia High School (Facility ID #2054), including two duplicate samples. A description of the drinking water outlets sampled and a summary of sample analytical results are provided in the attached table.

None of the samples collected and analyzed contained lead at a concentration equal to or above EPA's action level of 15 parts per billion.

We appreciate your selection of AEM for this project. If you have any questions, please do not hesitate to contact us.

Sincerely,

Atlanta Environmental Management, Inc.

**Re: Summary of Additional Lead in Drinking Water Sample Results
Columbia High School (Facility ID #2054)
2106 Columbia Drive, Decatur, Georgia 30032
AEM Project No. 1561-1601**

Dear Mr. Williams:

Atlanta Environmental Management, Inc. (AEM) is pleased to provide the DeKalb County School District (DCSD) an electronic copy of the Lead in Drinking Water Sample Results for Columbia High School (Facility ID #2054). Additional drinking water samples from select source units were collected on April 13, 2017, and analytical results were received from Analytical Environmental Services, Inc., on April 27, 2017.

FINDINGS

Initial Sample Results of Previously Identified Inoperable Source Units and/or Missed Sample Locations

During the initial sampling event on February 3, 2017, two source units were inoperable and could not be sampled. DCSD made repairs to the inoperable source units and AEM collected four drinking water samples from these units on April 13, 2017. Additionally, during the initial sampling event, three source units were required to be sampled; however, they were inadvertently missed and were not sampled. Thus, AEM collected six samples from these three source units on April 13, 2017.

A description of the drinking water outlet sampled and a summary of sample analytical results are provided in Table 1.

None of the samples collected from the source unit had a drinking water sample result that contained lead at a concentration at or above EPA's action level of 15 ppb.

Notes:

ppb-parts per billion

Bold-Exceeds 15 ppb--EPA's Action Level for Lead

* Note--Where "A" and "B" are indicated, AEM collected two samples at each source area location: ("A") initial draw sample; and ("B") after a 30-second flush sample

** Source unit was inoperable or not sampled on the initial test date (2/3/17). The above summarizes the results of the initial testing of this unit
